

Contextualizing Cameo Collaborator documents

Cameo Collaborator for Teamwork Cloud offers a number of functionalities allowing you to contextualize Cameo Collaborator documents. You can create new sections anywhere in a document, add paragraphs to these sections, and fill them with content, like explanatory texts and images. This allows you to enrich the published data so it can be understood by stakeholders or customers unfamiliar with modeling languages. In addition, you can manage new sections and paragraphs with just a few clicks.
