

Recursive properties

A recursive property is defined as a binary class `"com.nomagic.magicdraw.derivedproperty.RecursiveExpression()"` with parameters `<property-name>` and `<recursive-property-name>`.

Specify the expression in the following form - `com.nomagic.magicdraw.derivedproperty.RecursiveExpression(<property-name>, <recursive-property-name>)` (e.g. `com.nomagic.magicdraw.derivedproperty.RecursiveExpression(Classifier.specificClassifier, Classifier.allSpecificClassifiers)`)

Recursive properties enable you to collect and represent:

- All elements directly or indirectly related to a specific element through the generalization relationships.

Refer to the derived property customization expression, available at "UML Standard Profile::MagicDraw Profile::Traceability customization::Properties descriptors::Other::All Specific Classifiers::allSpecificClassifiers".

- All elements directly or indirectly related to a specific element through the abstraction and other types of relations.

Refer to the derived property customization expression, available at "UML Standard Profile::MagicDraw Profile::Traceability customization::Properties descriptors::Realization::Element All Realizing Elements::allRealizingElements".
