

Paths

Paths are presentation elements created for such model elements as Relationships. Path has the following attributes:

- **Supplier** – the presentation element of a Relationship supplier. Use method *com.nomagic.magicdraw.uml.symbols.paths.PathElement.getSupplier()* to access this element.
- **Client** – the presentation element of a Relationship client. Use method *PathElement.getClient()* to access this element.
- **Supplier point** – the connection point of a path and supplier element. Use method *PathElement.getSupplierPoint()* to access this point.
- **Client point** – the connection point of a path and client element. Use method *PathElement.getClientPoint()* to access this point.
- **Break points** – a list of path breaking points between supplier and client points. This list can be empty if path is straight. Use method *PathElement.getBreakPoints()* to access this list.
