

# Creating path elements

To create a `com.nomagic.magicdraw.uml.symbols.paths.PathElement` for given `ModelLink` between given client and supplier elements, use method `com.nomagic.magicdraw.openapi.uml.PresentationElementsManager.createPathElement(Element, PresentationElement, PresentationElement)`:

```
com.nomagic.uml2.ext.magicdraw.classes.mddependencies.Dependency link  
= ...;  
PresentationElement clientPE = ...;  
PresentationElement supplierPE = ...;  
SessionManager.getInstance().createSession("Test");  
PathElement path = PresentationElementsManager.getInstance().  
createPathElement(link, clientPE, supplierPE);  
SessionManager.getInstance().closeSession();
```

The diagram is not passed into `createPathElement(Element, PresentationElement, PresentationElement)` method. A new path element is created in the same diagram as client or supplier presentation elements.
