Merge API changes

Merge Plugin was split into two - Merge Plugin and Merge Core Plugin. Merge Core Plugin provides project comparison-related functionality, and Merge Core Plugin provides merge functionality on top of the comparison.

Because of that, `com.nomagic.magicdraw.merge.MergeUtil` was split into `com.nomagic.magicdraw.merge.MergeUtil` and `com.nomagic.magicdraw.merge.CompareUtil`.

MergeUtil helper API

- `com.nomagic.magicdraw.merge.MergeUtil#compareProjects`
- `com.nomagic.magicdraw.merge.MergeUtil#getDifference(com.nomagic.magicdraw.core.Project, com.nomagic.magicdraw.core.project.ProjectDescriptor, com.nomagic.magicdraw.core.project.ProjectDescriptor, com.nomagic.utils.ErrorHandler<java.lang.Exception>, com.nomagic.magicdraw.merge.Optimization)`
- `com.nomagic.magicdraw.merge.MergeUtil#getDifference(com.nomagic.magicdraw.core.Project, com.nomagic.magicdraw.core.project.ProjectDescriptor, com.nomagic.magicdraw.core.project.ProjectDescriptor, com.nomagic.utils.ErrorHandler<java.lang.Exception>, com.nomagic.magicdraw.merge.Optimization, java.util.Set<com.nomagic.magicdraw.diff.ModuleInfo>)`
- `com.nomagic.magicdraw.merge.MergeUtil#restore`
- `com.nomagic.magicdraw.merge.MergeUtil#showDifferenceGUI`

was changed with

- `com.nomagic.magicdraw.merge.CompareUtil#compareProjects`
- `com.nomagic.magicdraw.merge.CompareUtil#getDifference(com.nomagic.magicdraw.core.Project, com.nomagic.magicdraw.core.project.ProjectDescriptor, com.nomagic.magicdraw.core.project.ProjectDescriptor, com.nomagic.utils.ErrorHandler<java.lang.Exception>, com.nomagic.magicdraw.merge.Optimization)`
- `com.nomagic.magicdraw.merge.CompareUtil#getDifference(com.nomagic.magicdraw.core.Project, com.nomagic.magicdraw.core.project.ProjectDescriptor, com.nomagic.magicdraw.core.project.ProjectDescriptor, com.nomagic.utils.ErrorHandler<java.lang.Exception>, com.nomagic.magicdraw.merge.Optimization, java.util.Set<com.nomagic.magicdraw.diff.ModuleInfo>)`
- `com.nomagic.magicdraw.merge.CompareUtil#restore`
- `com.nomagic.magicdraw.merge.CompareUtil#showDifferenceGUI`

`MergeUtil` extends `CompareUtil`, so the old code is still compatible.

Other Open API changes

- `org.eclipse.core.runtime.IProgressMonitor` and extended classes are removed. All usages are changed to `com.nomagic.task.ProgressStatus`.
- JRuby scripting engine is removed. It is possible to add it to the application, but we highly recommend rewriting all existing scripts using any of the other supported scripting languages.
