

Configuring Resource Usage Map URL

You can specify an URL to have quick access to the [Resource Usage Map](#) right from your modeling tool. It is especially helpful when you need to inspect the project usages of a current Teamwork Cloud project.

To specify the Resource Usage Map URL

1. In the main menu, click **Collaborate > Open in Resource Usage Map**.
2. In the open dialog, specify the URL to access the Resource Usage Map.

 **URL Pattern**
The URL you enter must follow this pattern:

3. Click **Open**.

The Resource Usage Map is opened in your default web browser. Once the configuration is complete, the specified URL will be automatically opened when you click **Open in Resource Usage Map**.

To remove the specified Resource Usage Map URL

1. In the main menu, click **Options > Environment**.
2. On the left side of the **Environment Options** dialog, select the **Collaboration** option group.

3. Under **General**, next to **WebApp URL**, click  and then delete the existing URL.

4. Click **OK** when you are done.

The URL is removed, meaning that it will no longer be automatically opened when you click **Collaborate > Open in Resource Usage Map**. You can now set up another URL or leave the value undefined.
