

# NPV-2 Programme to Capability Mapping

## Description

The NPV-2 view provides a timeline perspective on programmes.

## Implementation

NPV-2 can be represented using a NPV-2 diagram which is a non-editable Dependency Matrix. Capabilities will be used as row elements and Actual Projects will be used as column elements.

## Sample

|                   | SAR-H | Training Paramedics to work alongside Fire Rescue Service | Emergency Response Enhancement | Flood Response | SAR Project |
|-------------------|-------|-----------------------------------------------------------|--------------------------------|----------------|-------------|
| NCV-2             |       |                                                           |                                |                |             |
| Assistance        |       |                                                           |                                |                | X           |
| Land SAR          |       |                                                           |                                |                |             |
| Maritime SAR      |       |                                                           |                                |                | X           |
| Recovery          |       |                                                           |                                |                | X           |
| SAR               |       |                                                           |                                |                |             |
| Search            |       |                                                           |                                |                | X           |
| UK SAR Capability |       |                                                           |                                |                |             |

NPV-2 Project to Capability Mapping

## Related views

This model is analogous to the NSV-5 System Function to Operational Activity Traceability Matrix, but provides the interface between Capability and Project Models rather than Operational to System Models.
