NAF 4.0 viewpoints and views

The NATO Architecture Framework (NAF) is a standard for developing Enterprise Architectures. An Enterprise Architecture is a model of a current or future state of an enterprise. An enterprise could be an organization, a system (including the human factors) or a project. The purpose of enterprise architecture is to capture the complex dependencies that exist in large-scale systems of systems so as to aid with decision support. NAF provides a standard way to model the architecture.

	-	Structure	Connectivity	Behaviour					
	Taxonomy			Processes	States	Sequences	Information	Constraints	Roadmap
Concepts	C1 Capability D Taxonomy	C2 Enterprise Vision	CO Capability Dependencies	C4 Standard D Processes	ali Citati		C7 Performance Parameters	CO Planning D Assumptions	Cr Capability Roadmap
