## **Creating Implementation Matrix**

The Rows of the Implementation Matrix represent the implementation elements and the Columns represent the specification elements.

To create an Implementation Matrix

- Specify the Rows Scope (implementation elements).
  Specify the Columns Scope (specification elements).
- 3. Click the Rebuild button.

The implementation elements map to the specification elements by using the Implements relation.

To map the implementation elements to the specification elements

1. Double-click an empty intersection between the desired elements.

To remove the relation

1. Double-click a full intersection between the desired elements.

The Implements relationship can be created according to the implementation rules:

- A System Resource can implement a Node/Performer.
- A Function can implement an Operational Activity.
- A Resource Interaction can implement an Operational Exchange.
- A Service Function can implement an Operational Activities
- A Service Function can implement a Function.
