The NATO Architecture Framework (NAF) is a standard for developing Enterprise Architectures. An Enterprise Architecture is a model of a current or future state of an enterprise. An enterprise could be an organization, a system (including the human factors) or a project. The purpose of enterprise architecture is to capture the complex dependencies that exist in large-scale systems of systems so as to aid with decision support. NAF provides a standard way to model the architecture.

	Taxonomy	Structure	Connectivity	Behaviour			Information	Constraints	Roadmap
				Processes	States	Sequences			
Concepts	C1 Capability Statement	C2 Enterprise Structure	C3 Capability Constraints	C4 Business Processes	C5 Mission		C7 Information Requirements	C8 Physical Constraints	C9 Capability Roadmap
Service Specifications	S1 Service Interface		S2 Service Endpoints	S3 Service Catalogue	S4 Service Roles	S5 Service References	S6 Service Information	S7 Service Policy	S8 Service Realization
Logical Specifications	L1 Role Types	L2 Logical Structure	L3 Role Constraints	L4 Logical Activities	L5 Logical States	L6 Logical Sequences	L7 Logical Data Model	L8 Logical Constraints	L9 Logical Roadmap
Physical Resource Specifications	P1 Resource Types	P2 Resource Structure	P3 Resource Constraints	P4 Resource Capabilities	P5 Resource States	P6 Resource Sequences	P7 Physical Data Model	P8 Resource Constraints	P9 Resource Roadmap
Deployed Resources	DR1 Resource Data	DR2 Resource Structure							DR3 Resource Roadmap
Architecture Meta-Data	AM1 Meta-Data Definition	AM2 Architecture Properties	AM3 Architecture Constraints	AM4 Architecture Roles	AM5 Architecture States	AM6 Architecture Sequences	AM7 Architecture Data Model	AM8 Architecture Constraints	AM9 Architecture Roadmap
