

# NAF 4.0 viewpoints and views

The NATO Architecture Framework (NAF) is a standard for developing Enterprise Architectures. An Enterprise Architecture is a model of a current or future state of an enterprise. An enterprise could be an organization, a system (including the human factors) or a project. The purpose of enterprise architecture is to capture the complex dependencies that exist in large-scale systems of systems so as to aid with decision support. NAF provides a standard way to model the architecture.

	Taxonomy	Structure	Connectivity	Behaviour	Information	Constraints	Roadmap
				Processes	States	Sequences	
Concepts	C1 Capability Concepts	C2 Enterprise Structure	C3 Capability Connections	C4 Business Processes	C5 States	C6 Information	C7 Constraints
Service Specifications	S1 Service Interface	S2 Service Structure	S3 Service Connections	S4 Service Processes	S5 Service States	S6 Service Sequences	S7 Service Constraints
Logical Specifications	L1 Logic Types	L2 Logical Structure	L3 Logic Connections	L4 Logical Processes	L5 Logical States	L6 Logical Sequences	L7 Logical Constraints
Physical Resource Specifications	P1 Resource Types	P2 Resource Structure	P3 Resource Connections	P4 Resource Processes	P5 Resource States	P6 Resource Sequences	P7 Resource Constraints
Deployed Resources	D1 Resource Data	D2 Resource Structure	D3 Resource Connections	D4 Resource Processes	D5 Resource States	D6 Resource Sequences	D7 Resource Constraints
Architecture Meta-Data	A1 Meta-Data	A2 Architecture Processes	A3 Architecture Connections	A4 Architecture States	A5 Architecture Sequences	A6 Architecture Constraints	A7 Architecture Roadmap
