In the UPDM plugin, time periods are used to specify resources for the architecture against a timeline indicating when they are expected to be in use. The **Time Periods** dialog is essential when defining time periods for the **forecast of the resources**. When [specifying time periods](#), you need to select a pre-existing timeline or create a new one, specify different time period types, and provide additional required data.

The **Time Periods** dialog consists of three areas:

- **Toolbar** - This area allows you to control how properties are displayed in the dialog.
- **Properties** - Provides the list of all properties that are available to specify.
- **Properties value cells** - The spaces where you can set values for the properties.

Time periods can be defined when the subjects, or resources, of the forecast are already added in the table. In other words, the **Technology area** column must be filled in with resources before adding a specific time period. Now, it is possible to use the **Time Periods** dialog.

The steps below show you how to work with the **Time Periods** dialog by explaining all properties that should have values defined, and by showing you how to specify those values.

To specify time periods using the **Time Periods** dialog

1. Open the **Time Periods** dialog, click  on the table toolbar.

2. (Optional) If you want to modify the view of listed properties, enable the buttons from the **Time Periods** dialog toolbar:

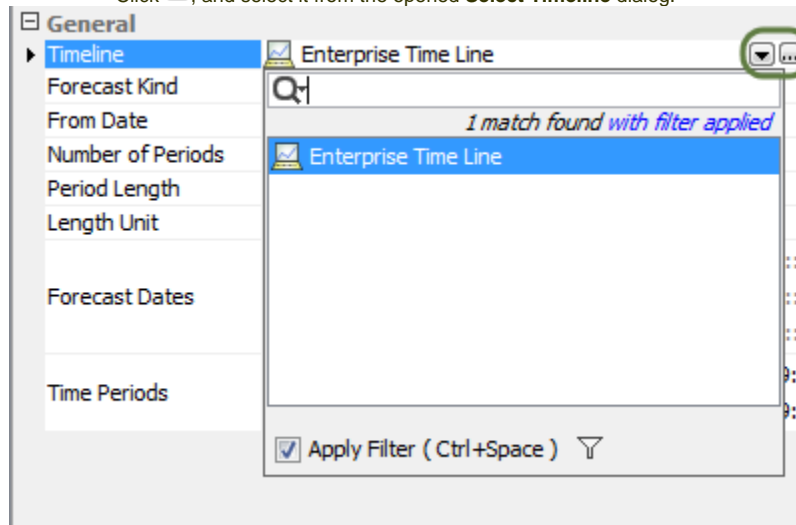

- Click  to group properties by the categories.
- Click  to list properties alphabetically.
- Click  to expand all collapsed categories.
- Click  to collapse all expanded categories.

3. Specify the Timeline property:

- Select a preexisting Timeline element.

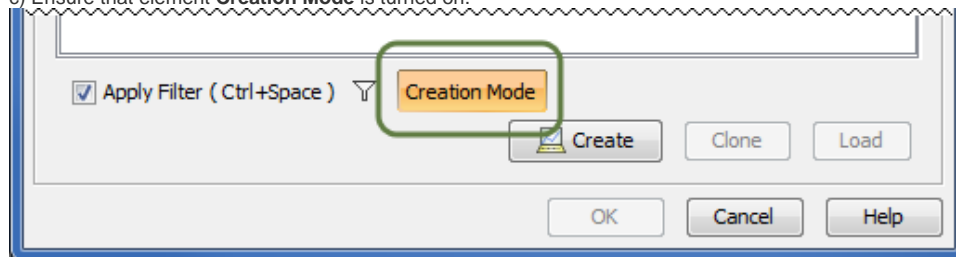

Click on the Timeline property value box, and do one of the following:

- Click , or press Alt+Down.
- Click , and select it from the opened **Select Timeline** dialog.

- Create a new Timeline element via the dialog.

- a) Click on the Timeline property value box.
- b) Select  to open the **Select Timeline** dialog.
- c) Ensure that element **Creation Mode** is turned on.

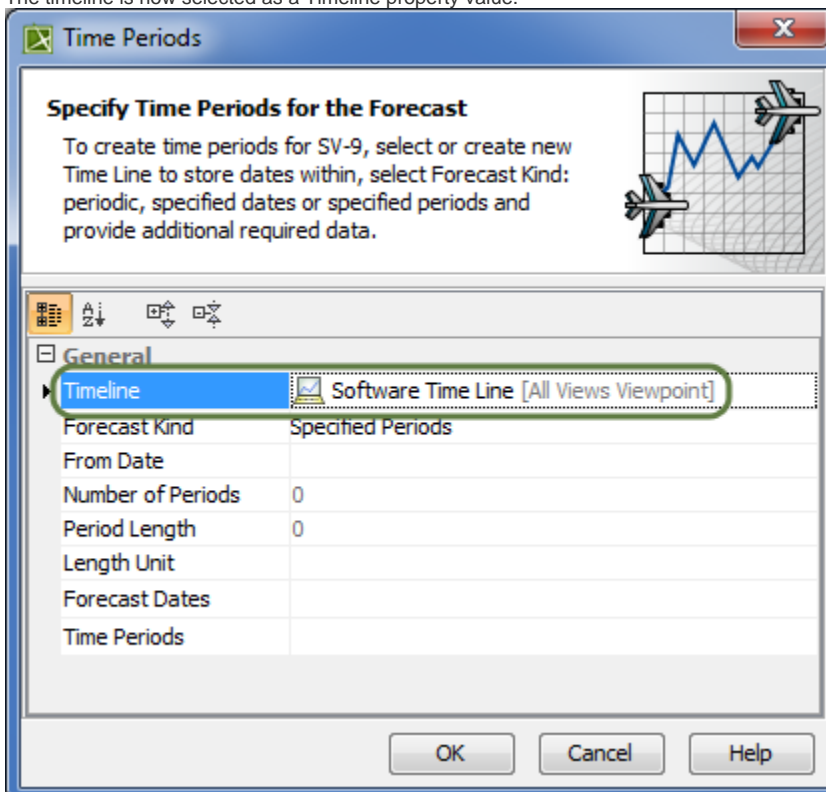

- d) Select the appropriate package from the list in which you want to store a new Timeline element.
- e) Click the **Create** button, or, from the shortcut menu of the selected package, select **Create > Timeline**. The Specification window of the newly created Timeline opens automatically.

f) Type the name of the new Timeline, and click **Close**.

g) In the **Select Timeline** dialog, select the newly created Timeline, and click **OK**.
The timeline is now selected as a Timeline property value.

4. Select one of three Forecast Kinds as property values:

- Periodic - to divide the forecast into equal periods.
- Specified Dates - to divide the forecast into specific dates.
- Specified Periods - to divide the forecast into specific time periods.

Time Periods

Specify Time Periods for the Forecast

To create time periods for SV-9, select or create new Time Line to store dates within, select Forecast Kind: periodic, specified dates or specified periods and provide additional required data.
