Actual Location

Description

MODAF/NAF: A PhysicalLocation (MODAF::ActualLocation, NAF::ActualLocation) is a location anywhere on the earth. The means of describing the location is a string (locationDescription). The information contained in that string is governed by the taxonomy reference - e.g. if the PhysicalLocation is a "GPS reference", the string will contain the GPS coordinates.

> **UPDM Extension**
> This has been extended in UPDM to include non-earth locations.

DoDAF: All subtypes of «IndividualType» Location, such as Facility, Site, etc.
