# Automatic Instantiation wizard

The **Automatic Instantiation** wizard is used to automatically instantiate any typical structure of UPDM architecture.

To open the **Automatic Instantiation** wizard

1. Select any number of instantiable UPDM elements and right-click them.
2. On the shortcut menu, choose **Tools** > **Create Instance**.
   The **Automatic Instantiation** wizard opens.

The wizard consists of these three steps:
1. Selecting parts.

   In this step, select elements and their internal parts to instantiate.
2. Selecting a package.

   In this step, select, create or clone the package to store the created actual structure.
3. Creating a diagram.

In this step, specify diagram name, select diagram type to visualize the actual structure and the package to store the diagram.
