Creating P1 Systems to Systems Matrix

A P1 Systems to Systems Matrix is an editable matrix where cells of the matrix represent a Resource interactions and their headers represent Resources.

Arrow can be positioned on one side of the matrix or the other depending on the direction of the Resource interaction between resources. The P1 matrix consists of as many rows and columns as there are Resources in the matrix data source.

To create a P1 Systems to Systems matrix

1. Specify the **Row Scope** (System Resources).
2. Specify the **Column Scope** (System Resources).
3. Click the **Rebuild** button.
