

Standard

Description

MODAF/NAF: A ratified and peer-reviewed specification that is used to guide or constrain the architecture. A Standard may be applied to any element in the architecture via the [constrainedItem] property of UML::Constraint.

DoDAF: A formal agreement documenting generally accepted specifications or criteria for products, processes, procedures, policies, systems, and/or personnel.

Architecture Framework

DoDAF, MODAF, NAF

Properties

Property	Description
InformationTechnologyStandardCategory: String[*]	The information technology standard category which the «Standard» belongs to.
currentStatus : String[1]	The current status of the Standard.
