

# Operational Event Trace

## Description

MODAF/NAF: An `OperationalEventTrace` (`MODAF::OperationalInteractionSpecification`, `NAF::OperationalInteractionSpecification`) is a specification of the interactions between nodes in an operational architecture.

DoDAF: The Operational Event-Trace Description (OV-6c) DoDAF- described View provides a time ordered examination of the resource flows as a result of a particular scenario. Each event- trace diagram will have an accompanying description that defines the particular scenario or situation.

## Architecture Framework

DoDAF, MODAF

## Extensions

UML Interaction
