

Working with Operational Role-based Connectivity Table

A role-based table represents exchanges between Operational Roles (the usages of Operational Performers). You can add an existing Operational Exchanges or Operational Connectors to fill in the Operational Role-based Connectivity Table.

To add an existing Operational Exchange or Operational Connectors in the Operational Role-based Connectivity Table

1. In the Operational Role-based Connectivity diagram toolbar, click the **Add Existing** button. The **Select Elements** dialog opens.
2. Double-click Operational Exchange/Operational Connector from the list to add them in the table.

For multiple selection, click the **Multiple Selection** button in the right bottom of the dialog, select Operational Exchange/Operational Connector and click **+** button.

3. Click **OK** when you are done.
The rows with selected Operational Exchanges/Operational Connectors are added to the table.
