

Strategic Traceability

Description

The Strategic Traceability (St-Tr) describes the mapping between the capabilities required by an Enterprise and the phasing constructs and association with relevant challenges and drivers. With a help of the Strategic Traceability (St-Tr) view specification you can identify how the required capabilities and the actual strategic phases that those actual strategic phases support are mapped.

Implementation

The Strategic Traceability (St-Tr) view specification is represented by a [Actual Strategic Phases to Capabilities Mapping matrix](#) which is an editable Dependency Matrix. The Rows of this matrix are Actual Strategic Phases and the Columns are Capabilities.

Sample

Legend		Strategic Taxonomy [Model::Strategy]																									
Phases																											
Phases (Implied)																											
Strategy [Model]																											
Strategic Roadmap																											
SearchAndRescue : Search and Rescue																											
Strategic Deployment																											
Strategic Structure																											
S&R : Search & Rescue																											
SARPhase1 : SARPhase1																											
SARPhase2 : SARPhase2																											
SARPhase3 : SARPhase3
