

What's New in Cameo Concept Modeler 18.0 LTR SP11

Released on: October 13, 2017

Usability improvements

- When a Class that has a blank IRI tagged value is moved to another «Model», the blank IRI is removed and the user is warned.
- A script is now provided to migrate older models to use relative IRIs, which simplifies model refactoring. (To install for each one-time use, please see instructions in <MagicDrawInstall>\data\Concept Modeler\scripts\UpdateIRI Readme.txt)
- A «Model»'s URI and «Resource» IRI tagged value are always synchronized.

Natural Language Glossary improvements

- A new header at the top of the glossary now allows reviewers to search for class and/or property names.
- Alphabetical indexes no longer scroll off the page.
- A *Title* variable can be set in the Report Wizard to customize a glossary's header.
- A *TitlePreamble* variable can be set in the Report Wizard to add custom HTML, such as an image, to a glossary's header.
- The variables *ClassSuppressionRegex* and/or *PropertiesSuppressionRegex* can each be set to a regular expression in the Report Wizard to keep undesirable entries from appearing in the glossary.

Bug fixes

CCM

- The **Click here** hyperlink that appears in a new project file now correctly opens the CCM manual.
- The **Concept Model** action menu is no longer disabled for a «Model».
- The **Concept Model** action menu is no longer enabled for unlocked elements in a TWCloud project.
- All elements that will be affected by a change to the preferred annotation project option are now locked for edit in a TWCloud project, or the change is disallowed with an informative warning.
- An OWL property with multiple inverses now results in an «Equivalent Property» and an «Inverse of» instead of resulting in a repeatedly subsetted UML property.
- In a diagram, the property menu option **Make property sufficient to classify an instance** is no longer disabled when right-clicking on text that is relevant to the property.
- When an OWL ontology is imported, annotations and annotation properties from an unrelated «Model» are no longer deleted.

AutoStyler

- Suppressed noisy INFO messages.
