

# Main features

The Excel Import plugin is capable of:

- (i) Importing table headings from an Excel or CSV file as schema classes.
- (ii) Creating a mapping diagram.
- (iii) Importing data as instance specifications to a schema class and according to a class mapping.
- (iv) Exporting elements or instance specifications into an Excel or a CSV file.

You can access the main features of Excel Import either from (i) the main menu in MagicDraw or (ii) the context menu of a schema class or a class mapping.
