# Managing derived SysML properties and tags

All derived SysML properties and tags are collected in the **Allocations** property group.

To add or remove an element

___

1. Click ⌂ on the left.
2. Select an element from the **Select Elements** dialog.
3. Click [ + ] to add element / [ − ] to remove element.
4. Click **OK**.

The corresponding relationships are created and collected in the **Relations** property group.

| Column name | Description |
| --- | --- |
| **Allocated From** | Elements that are allocated to this element. |
| **Allocated To** | Elements the selected element is allocated to. |
