Enforce Ports Compatibility mode

Enforce Ports Compatibility mode restricts connections and persists clearly visible only compatible ports (Flow Port, Full Port, Proxy Port) in SysML Internal Block Diagram and Constraint Parameters in SysML Parametric Diagram. Non compatible elements become transparent.

To use **Enforce Ports Compatibility** mode

---

1. Switch to **Enforce Ports Compatibility** mode.
2. Create the connection between ports (Flow Port, Full Port, Proxy Port) or Constraint Parameters.
   All ports and Constraint Parameters that are compatible to connect persist clearly visible.
