

Global validation rules

Global validation rules check the result of an element set, while validation rules contained in [predefined validation suites](#) or [active validation suites](#) are dedicated to check a separate element. You can create global validation rules in the same way as other validation rules by defining an appropriate condition in the **Specification** property.

- [How to create validation rules >](#)
- [How to define Constraint expression >>](#)

For example, the *balanced budget* validation rule (Constraint specification is shown in the following figure) is a global validation rule. It is created for the classifier of the *ResearchProject* Class. The *balanced budget* validation rule condition, defined by using OCL2.0 language in the **Specification** property, expresses that the sum of the expenses of all projects must be less than the sum of all *Sponsor* contributions. This validation rule is global because it includes all instances in the model, rather than only the particular instance of *ResearchProject* that violates the rule.

Sample model

An example of a global validation rule can be found in the **model validation** sample model > *Classifiers Validation Rules* [Class diagram](#). To open this sample do one of the following:

- Download [model validation.mdzip](#).
- Find in the modeling tool <modeling tool installation directory>\samples\product features\model validation.mdzip.

Specification of Constraint balanced budget

Specification of Constraint properties

Specify properties of the selected Constraint in the properties specification table. Choose the Expert or All options from the Properties drop-down list to see more properties.

Help

The specification of the global validation rule named balanced budget.

After the validation finishes, the global validation rule is marked as <model> in the **Validation Results** panel > **Element** column. This means that the entire model, not the separate element, violates the rule.

Element	Severity	Abbre...	Message	Not Ignored
<model>	error	BDG	Budget not balanced - overbudget by 500\$	Not Ignored
bearing	error	OWN	The detail must be a part of a product or another detail	Not Ignored
box	error	DET	The product must have at least one detail	Not Ignored
DoD : Classifiers Validation Rules::Sponsor	error	Sponsor	Each sponsor contribution must be <40% of all contributions	Not Ignored
