## Requirement matrices

The matrices enables you to analyze, create, and modify relationships between Requirements and other design elements. It is especially valuable that you can display relationships that cannot be represented in diagrams, such as representations (classes by lifeline), behavior representations in other diagrams, operation representations by Call Behavior Actions, etc. All Requirement matrices allows you to perform Requirements gap and coverage analysis.

You can create four kind of Requirements matrices:

- Derive Requirement Matrix.
- Refine Requirement Matrix.
- Satisfy Requirement Matrix
- Verify Requirement Matrix.

The different purposes for each matrix are illustrated below:

- Derive Requirement Matrix allows you to analyze, create, and modify Derive relationships between Requirements and other design elements. Rows represent the elements that are the clients of Derive relationship. Columns represent the Requirements that are the suppliers of Derive relationship. The example below is created by using the extract requirement values.mdzip sample model that comes only with SysML Plugin.

- Refine Requirement Matrix allows you to analyze, create, and modify Refine relationships between Requirements and other design elements. Rows represent the elements that are the clients of Refine relationship. Columns represent the Requirements that are the suppliers
of the Refine relationship．The example below is created by using the extract requirement values．mdzip sample model that comes only with SysML Plugin．

| Legend <br> $\nearrow$ Refine |  |  |  |  |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| $\square$－$\square$ Use Cases |  | 2 |  | 3 | 11 | 5 | 8 | 2 | 2 |
| 自． O Accelerate |  | 2 |  |  |  |  |  |  | 2 |
| ．．．d Provide electric engine power（context Hybrid Vehide） | 2 | J |  |  |  |  |  |  | $\nearrow$ |
| ．．．．Provide power from electric and gasoline engines（context Hybrid Vehicle） | 2 | $\nearrow$ |  |  |  |  |  |  | $\nearrow$ |
| 自－Brake |  |  |  | 2 |  | 5 | 6 |  |  |
| ．．．t ACC Brake（context Hybrid Vehide） | 3 |  | 1 | J |  | $\nearrow$ | $\nearrow$ |  |  |
|  | 2 |  | 1 | $\nearrow$ |  |  | $\nearrow$ |  |  |
| ．－．Detect presence and speed of vehicles（context Hybrid Vehide） | 2 |  |  |  |  | $\nearrow$ | $\nearrow$ |  |  |
| ．．．．．Pre－charge brake for more aggressive braking（context Hybrid Vehide） | 2 |  |  |  |  | $\nearrow$ | $\nearrow$ |  |  |
| ．－． ．Provide audible alert（context Hybrid Vehide） | 2 |  |  |  |  | $\nearrow$ | $\nearrow$ |  |  |
| ．．．．Send laser signal（context Hybrid Vehicle） | 2 |  |  |  |  | $\nearrow$ | $\nearrow$ |  |  |
| 白．$\square$ Magic Hybrid Vehicle |  |  |  | 1 | 11 |  | 2 | 2 |  |
| 自．－Charge vehicle |  |  |  |  | 11 |  |  |  |  |
| 的 Charge the vehicle（classifier behavior）（context Power Source Context） | 1 |  | 1 |  | $\nearrow$ |  |  |  |  |

－Satisfy Requirement Matrix allows you to analyze，create，and modify Satisfy relationships between Requirements and other design elements．R ows represent the elements that are the clients of Satisfy relationship．Columns represent the Requirements that are the suppliers of the Satisfy relationship．The example below is created by using the extract requirement values．mdzip sample model that comes only with SysML Plugin．

| Legend <br> ， 3 Satisfy |  |  |  | R SR5 Category 1 of Ultra Low Emission Vehicle |  |  |  |  |  |  |  |  |  |  |  |  |  |  | $\begin{aligned} & \text { g } \\ & \text { N } \\ & \text { U } \\ & \text { U } \\ & \text { v } \\ & \text { 回 } \end{aligned}$ |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| $\square$－$\square$ System Structure |  | 1 | 1 |  |  | 1 | 1 |  | 1 |  | 1 | 1 | 1 | 1 | 1 | 1 | 1 | 1 |  |  | 1 | 1 |

| V fluidBoilingTemperature ：celsiusTemperature |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  | ， |  |  |  |  |
| 回．Fuel Tank Assembly |  |  |  |  |  |  |  |  | 1 |  |  |  |  |  |  | 1 |  |  |  |  |  |  |
| －－v／distanceOnGasolineMode ：distance［kilometre］ |  |  |  |  |  |  |  |  | $\cdots$ |  |  |  |  |  |  |  |  |  |  |  |  |  |
| ，．．－$\square$ consumption ：volume［decicubic metre］$=6.0$ |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  | $\pi$ |  |  |  |  |  |  |
| 白 $\square_{\text {H }}$ High－voltage Battery |  |  |  |  |  | 1 | 1 |  |  |  | 1 | 1 | 1 | 1 |  |  |  |  |  |  |  |  |
| －$\square$ distanceOnFullCharge ：distance［kilometre］＝ 200.0 |  |  |  |  |  | $\cdots$ |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |
| －$\square$ distanceOnQuickCharge ：distance［kilometre］＝ 95.0 |  |  |  |  |  |  | 7 |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |
|  |  |  |  |  |  |  |  |  |  |  |  |  |  | $\cdots$ |  |  |  |  |  |  |  |  |
| －．- f fullChargeTime ： time $=150.0$ |  |  |  |  |  |  |  |  |  |  | $\cdots$ |  |  |  |  |  |  |  |  |  |  |  |
| ．－V mass ：mass［kilogram］$=100.0$ |  |  |  |  |  |  |  |  |  |  |  |  | ，${ }^{1}$ |  |  |  |  |  |  |  |  |  |
| －．－quickChargeTime ： time $=45.0$ |  |  |  |  |  |  |  |  |  |  |  | ， |  |  |  |  |  |  |  |  |  |  |
| 白－ 回 Power Subsystem |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  | 1 |  |  |  | 1 |  |
| －．- acceleration ：speed［metre per second］ |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  | ， |  |  |  |  |  |
| ．．．． V maxSpeed ：speed |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  | $\cdots$ |  |

－Verify Requirement Matrix allows you to analyze，create，and modify Verify relationships between Requirements and other design elements．Rows represent the elements that are the clients of Verify relationship．Columns represent the Requirements that are the suppliers of the Verify relationship．The example below is created by using the Categorization requirements．mdzip sample model that comes only with Cam eo Requirements Modeler Plugin．

How to work with Requirement matrices
Requirement matrices are based on Dependency Matrix. That's why all it's procedures are allowable for Requirement matrices:

Unknown macro: 'list-children'
