# Specifying project properties

The **Project Properties** dialog provides general information about a project. You can add a title, author, version, and project description using this dialog.

To open the **Project Properties** dialog

1. Open the project.
2. Select the **Project Properties** command from the **File** menu.

> ✅ **Title**
>
> The project title is assigned as a value of the project [Documentation property](#).

To specify compatibility range

1. Enter the **Version** value.
2. Enter the **Compatible with.** The value must be less or equal to **Version** value.
3. Click **OK** after you are done.

> ⚠️ **Compatible With**
>
> **Compatible With** defines forward compatibility range between two Standard/System profile versions. Once specified, it helps to avoid read-only constraints in TWCloud projects in cases client uses earlier profile versions locally compared to those used in the server project.
>
> When the **Version** of the Standard/System profile on the user's computer is earlier (e.g. 19.0 SP1) than the **Version** of this profile on TWCloud (e.g. 19.0 SP3), but higher or equal to the value of **Compatible with** (e.g. 19.0), the user will still be able to edit TWCloud projects using the profile.

To use advanced options

1. Click **More** to see more options:

   - Review project statistics in the **Statistics** tab.
   - See the list of shared packages in the **Shared Packages** tab. In this tab you can:
     - Define a preferred path to the particular package. Click the **...** button to select the package in the **Preferred Path** value box.
     - Set the project as a standard/system profile. Select the **Standard/System Profile** check box for this.

       > ⚠️ **Note**
       >
       > The **Shared Packages** tab is available for local projects only.

   - The **Used Projects** tab shows the projects and standard/system profiles used in the open project. Click the **Open Project Usages** button to open the **Used Projects** dialog, where you can modify project usages.
   - The **Advanced** tab shows project meta information. In this tab you can:
     - Reset all project element IDs. All project elements have their own ID (a unique identifier). While working with several related projects, you may receive a message about duplicated element IDs. After clicking the **Reset IDs** button, new IDs will be created for all project elements.

       > ⚠️ **Note**
       >
       > Make sure the project you are resetting IDs for is not used in other projects.

     - Reset the project ID. After clicking the **Reset Project ID** button, new IDs are created for the project.

       > ⚠️ You cannot reset the project ID forserverprojects.
