Starting the DOORS client

Before you can perform any DataHub operations, e.g., setting up an IBM[®] Rational[®] DOORS® Data Source, you need to start the DOORS client application, as well as deploying the DOORS driver from the **DataHub** menu in MagicDraw. After starting the DOORS client, you can create DOORS Data Sources in the MagicDraw® **DataHub Explorer** tab. If the DOORS client is not started, MagicDraw[®] displays an error dialog that it cannot be connected to the DOORS client.

To start the DOORS client

- 1. Open IBM[®] Rational[®] DOORS[®] and log on to the DOORS client.
- 2. From the DataHub menu in the MagicDraw main menu, deploy the DOORS driver.

You can now connect to DOORS from DataHub and create DOORS Data Sources from the MagicDraw® DataHub Explorer tab.
