

Making subclasses overlapping

Related Pages:

Unknown macro: 'list-children'

How to make subclasses overlapping

1. Right-click on the generalization relationship.
2. Select **Concept Modeling**.
3. Select **Make subclasses overlapping**.

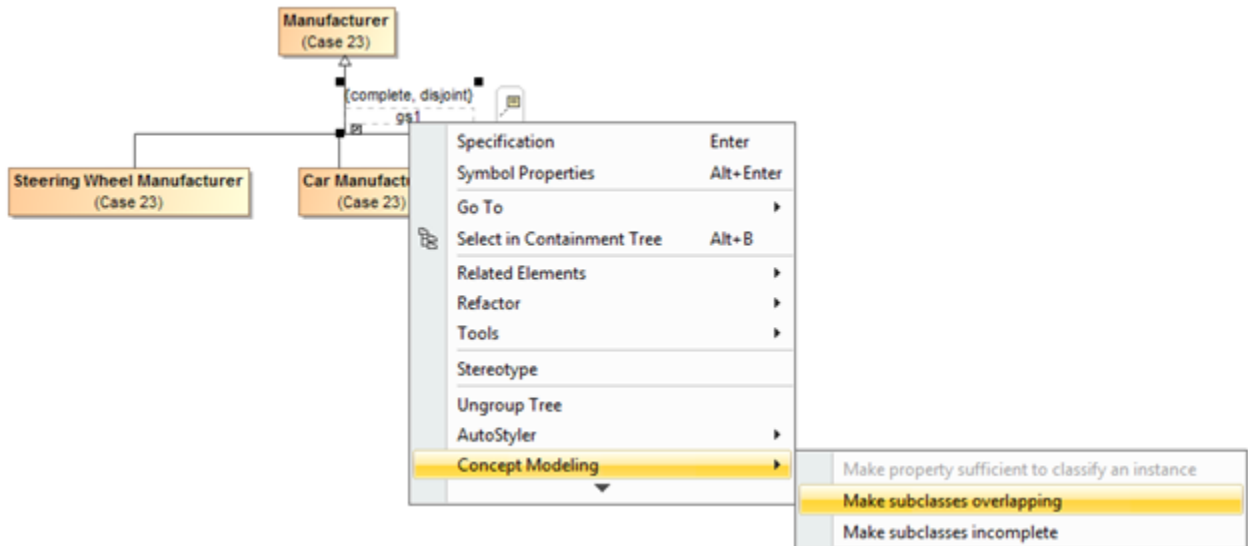

Figure 1: Selecting the Make subclasses overlapping shortcut menu.

Note

- Setting the {incomplete, disjoint} constraint back to the default setting of {incomplete, overlapping} will result in the removal of the generalization set, which has the same meaning.
- Starting from MagicDraw 18.3, the **Concept Modeling** menu is disabled when you right-click a tree or a generalization set on a diagram because the menu options for creating a generalization set have been moved outside the **Concept Modeling** menu (see Figure 2 example).
