

# User group

A user group is used to group users and hand out the same role assignments the users (members) in the same group. When you create a user group and assign role assignments including the scope, you assign them to all of the members in the user group. You can update information and delete a user group. You can also [import](#) a user group from an LDAP server as an external user group and all members of the user group will be imported to Teamwork Cloud (TWCloud) as external users as well. To update the information of an external user group in TWCloud, you need to resynchronize it with that of the LDAP server.
