

# Password-protecting a resource

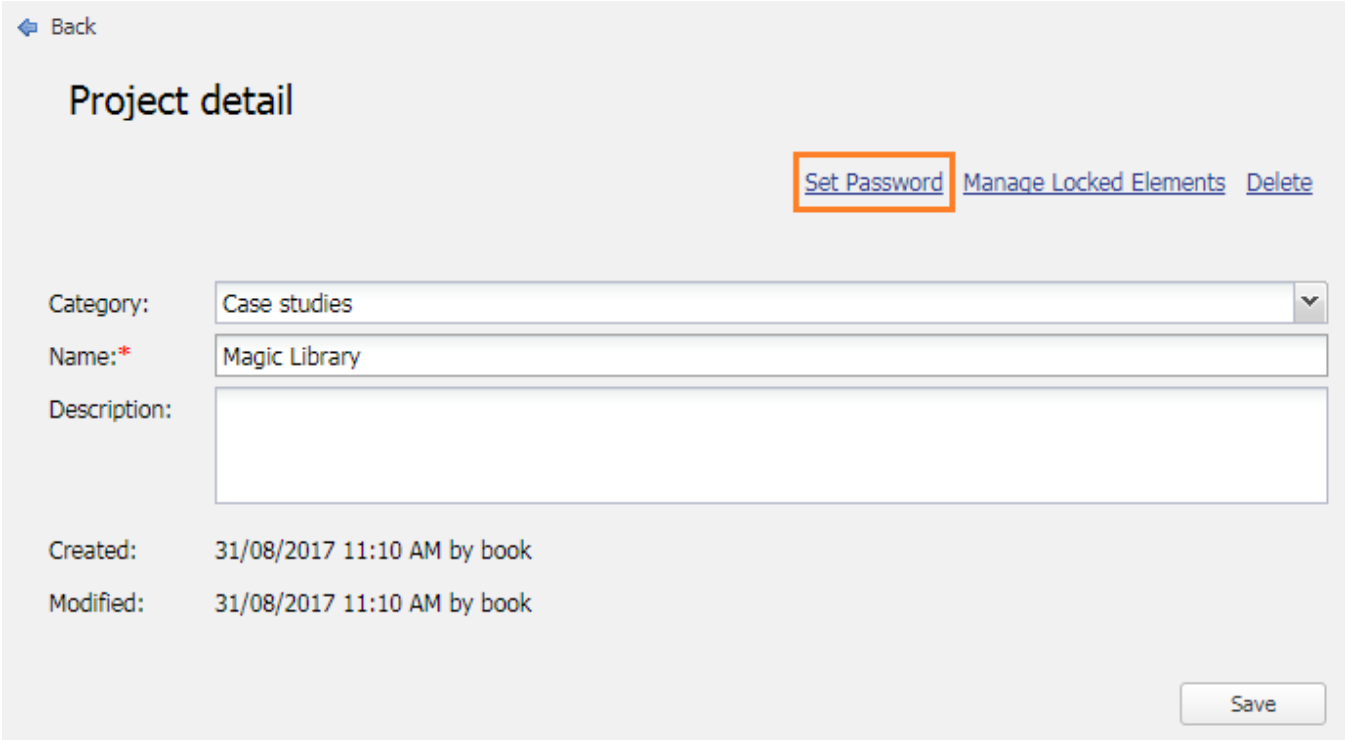

Increase the security of your project by using a password. The Teamwork Cloud (TWCloud) password protection prevents unauthorized users from accessing your project and modifying it. An authorized user must enter the correct password before accessing the project model on a MagicDraw client. Add a password to a project through either the **Repository Management** page or the **Project detail** page. You can always update or remove the password.

The following figure shows the **Set Password** command on the **Repository Management** page.

Password-protecting a project by selecting the Set Password menu on the Repository Management page .

The following figure shows the **Set Password** command on the **Project detail** page.

Password-protecting a project by clicking the Set Password button on the Project detail page.

Once the project is password-protected, the **Set Password** menu/button changes to the **Update Password** menu/button. A password-protected project is easily distinguished by the lock icon before its name on the **Repository Management** page.

A lock icon in front of the project name means that the project is password-protected.

A project detail pages also shows a lock for a project that is password-protected.
