

Managing resource categories

You can categorize resources into groups. Teamwork Cloud Admin (TWAdmin) helps you categorize resources through the [Repository Management page](#). Resource categories are sortable. A user with the role Project Creator can create resource categories. You can create as many categories as desired. A resource category enables visual grouping of resources especially if you have a long list of them. It can also help you search for a resource faster if you know in which category it belongs.

If you create a resource but you do not specify its category, it will automatically go to the **Uncategorized** group. Resources in **Uncategorized** do not belong to any specific category. Therefore, if you delete a particular category, all resources in the deleted category will be moved to the **Uncategorized** group.

Besides creating and editing a resource category, you can also remove or delete one or more resources from a category and move it from one category to another.

This page provides details about the following.

- [Creating a category](#)
- [Deleting a category](#)
- [Editing a category name](#)
