Creating Blank UPDM Project

You can create the blank UPDM project. In that project, there will be no predefined structure, so you will be able to make your own.

To create a blank project

- 1. Do one of the following:
 - Select File>New Project.
 - On the main toolbar, click the New Project button.
 - Press Ctrl+N.
- 2. In the New Project dialog, under Enterprise Modeling, select Blank UPDM Project.
- 3. Specify name, location, and other preferences if needed.
- 4. Click OK when you are done.

By default, DoDAF 2.0 Architectural Framework will be selected in the **General** property group. You can select any of the available Architectural Frameworks.

You can always change the Architectural Framework in the Project Options dialog General project options group.
