

Creating SvcV-1 diagram

You can create an SvcV-1 just before finishing an [OV-2](#) or in later stages of the architecture just before finishing the [SV-1](#) or [SV-2](#) views.

To create a SvcV-1 diagram

1. Create Service Specification.
2. Associate Service Specification using Association relationships.

The SvcV-1 product also allows you to show the Capabilities and Service Specifications mapping and Service Specifications interactions with the system resources. You can model each Service Specifications internal structure directly in the compartment area of the element shape or using the [SvcV-2 Services Resource Flow Internal Description diagram](#).

You can proceed to create [SvcV-4](#) view as soon as the SvcV-1 has been completed.
