

Resources Connectivity

Description

The Resources Connectivity (Rs-Cn) table summarizes the exchanges between resources of information, systems, personnel, natural resources, etc., and the functions that produce and consume them. Measurements can optionally be included.

The Resources Connectivity Internal diagram addresses the internal composition and interaction of systems.

The intended usage of the The Resources Connectivity (Rs-Cn) view includes:

- Summarizing system resource exchanges.
- Interface management.
- Comparing interoperability characteristics of solution options.
- Detailed definition of resource flows.

Implementation

The Resources Connectivity (Rs-Cn) is represented by:

- [Resources Connectivity diagram](#)
- [Resources Internal Connectivity diagram](#).
- [Resources Connectivity matrix](#). It represents exchanges between resources.
- [Resources Role-based Connectivity table](#). It represents exchanges between Resource Roles (resource usages).
- [Resources Connectivity Table](#).
- Reports (.xlsx):
 - Resources Connectivity Table Excel Spreadsheet.
 - Resources Role-based Connectivity Table Excel Spreadsheet.
