

Working with Resources Parametric diagram

Description

A Parametric diagram includes the usage of a [Constraint Block](#) to constrain the properties of another Resource Performer (e.g. Capability Configuration, Resource Artifact, System). It contains [Constraint Properties](#) and Constraint Parameters as well as other properties (Resource Role or Measurements) from within that internal Resource Performer context. All properties displayed, other than the constraints themselves, must either be bound directly to a Constraint Parameter or contain a property that is bound to a Constraint Parameter (through any number of containment levels). A Constraint Block generally contain many constraints, each of them containing many Constraint Parameters.
