

Working with Resources Taxonomy table

To create a Resources Taxonomy table

- Click the **Add New** button and select Capability Configuration, Known Resource, Natural Resource, Organization, Person, Post, Resource Architecture, Resource Artifact, Resource Mitigation, Responsibility, Security Enclave, Software, System, or Technology. Enter a name and define the documentation.
- Click the **Add Existing** button and in the **Select Resource Performer** dialog, select the desired Resources. Define the documentation.

You can change the table display mode by choosing one of the following:

- Complete tree
- Compact tree
- List
