Working with Security Taxonomy table

To create a Security Taxonomy table

- Click the **Add New** button and select Capability Configuration, Data Element, Information Element, Known Resource, Natural Resource, Operational Architecture, Operational Mitigation, Operational Performer, Organization, Person, Post, Resource Architecture, Resource Artifact, Resource Mitigation, Responsibility, Security Enclave, Software, System, or Technology. Enter a name and define the documentation.
- Click the **Add Existing** button and in the **Select Asset** dialog, select the desired elements. Define the documentation.

You can change the table display mode by choosing one of the following:

- Complete tree
- Compact tree
- List
