Projects Connectivity

Description

The Projects Connectivity (Pj-Cn) domain shows the relationships between projects and project milestones.

The Projects Connectivity (Pj-Cn) domain enables the user to model the organizational structures needed to manage programs, projects, portfolios, or initiatives. It shows dependency relationships between the actual organizations that own the programs, projects, portfolios, or initiatives. This model could be used to represent organizational relationships associated with transformation initiatives along with those who are responsible for managing programs, projects, and portfolios. The Projects Connectivity (Pj-Cn) domain provides a means of analyzing the main dependencies between acquisition elements or transformation elements.
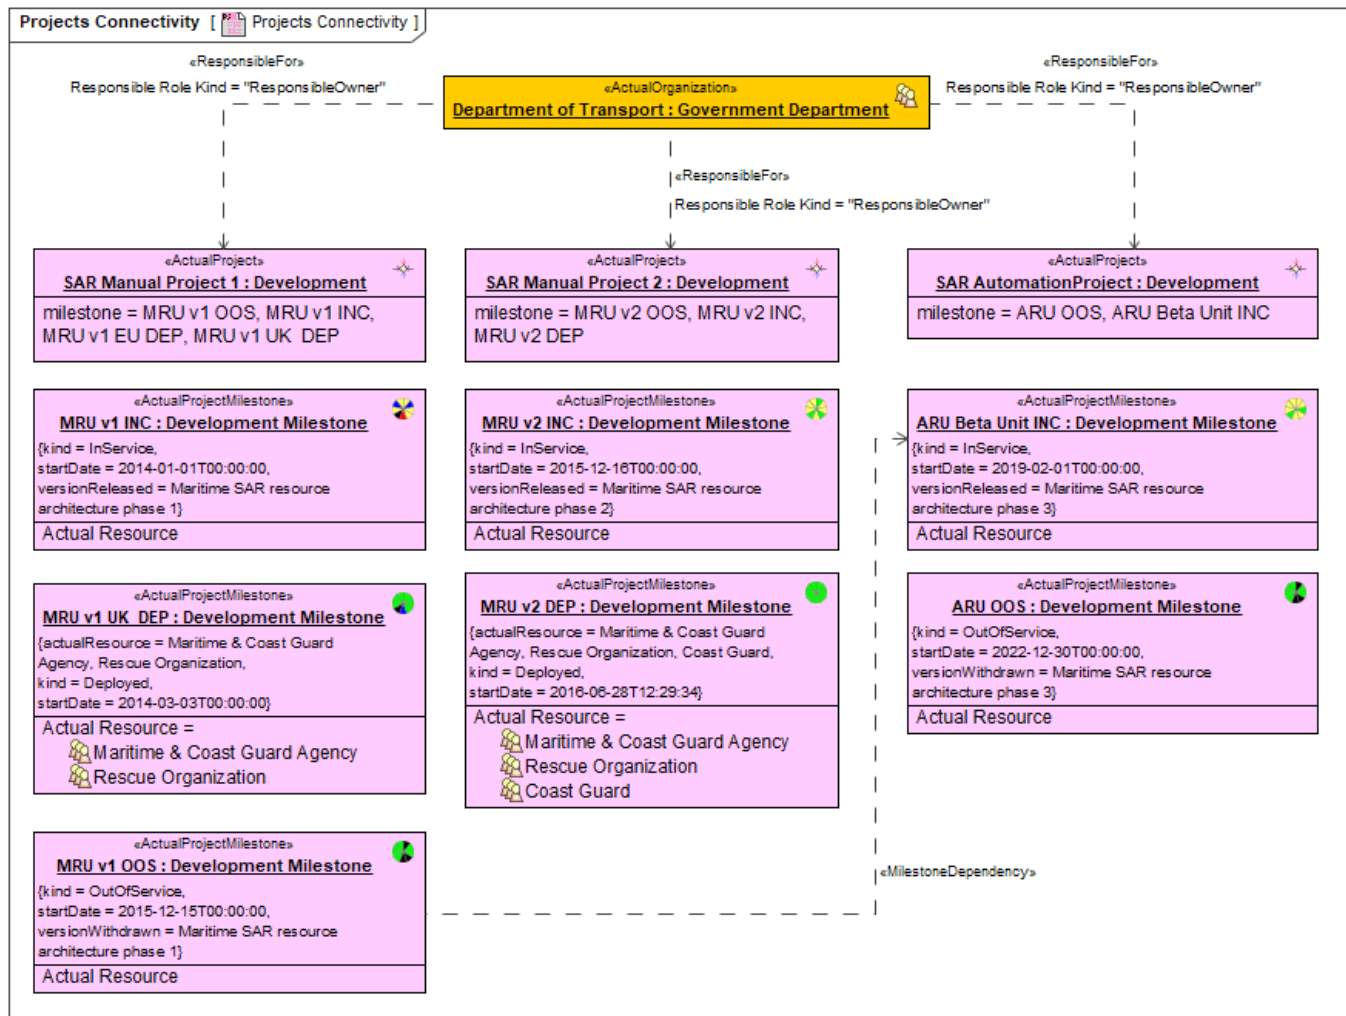

The intended usage of the Projects Connectivity (Pj-Cn) domain includes, but is not limited to:

- Program management (specified acquisition program structure).
- Project organization.
- Cross-cutting initiatives to be tracked across portfolios.

Implementation

The Projects Connectivity (Pj-Cn) domain is represented by Projects Connectivity diagram.
