

# Building NCV-7 matrix

The Capability to Services Mapping Matrix (NCV-7) depicts which Service Specifications contribute to the achievement of a Capability directly or using the [implied relations](#).

The rows of this matrix represent Service Interfaces and the columns represent Capabilities.

To build a NCV-7 matrix

---

1. Specify the **Row Scope** (Service Interfaces).
2. Specify the **Column Scope** (Capabilities).
3. Click the **Rebuild** button.

To map a Service Interface to a Capability

---

- Click the intersection between the desired elements

Click the intersection again and the relation will be deleted.
