

#forcol directive

This directive is designed only for the OpenDocument Spreadsheet, Microsoft Word document (DOCX), Microsoft PowerPoint presentation (PPTX), and Microsoft Excel Spreadsheet (XLSX) templates. This directive allows loops over the column.

	A	B	C
1	#forcol(\$uc in \$UseCase)	\$uc.name	#endcol
2			

Based on the example shown in figure above, the engine will generate a report with different columns for each Use Case name. The output from this example will appear as shown in the figure below:

	A	B	C	D
1	Use Case A	Use Case B	Use Case C	Use Case D
2				

You can combine both **#forrow** and **#forcol**, and produce a more complex output report (see figure below).

	A	B	C
1	#forrow(\$p in \$Package)	#forcol(\$e in \$p.ownedElement)\$e.name#endcol	#endrow

In the figure below, the output generated from the Magic Library sample project is shown.

	A	B	C	D	E	F
1	Domain Analysis	Diagram Loan Collaboration	Diagram Loan	Diagram Obj	Dependency	Dependency
2	conceptual perspective					
3	Implementation	Node Remote Web Client	Node Remote	Artifact Inter	Artifact Mag	Artifact Mag
