

# Specifying criteria, layout, and depth

After creating a relation map, you need to specify criteria, layout, and depth for it.

To change the relation map properties

- Right-click the diagram pane and from shortcut menu, select **Specification**, or click  on the Options toolbar and then select **Specification**. Change the property values in the Specification window of the relation map.
- Specify the most popular property values by using the relation map environment capabilities, such as toolbars and the **Criteria** area.

Element name	Element type	Description
Context	Text box with 	Click to select the main element from which the structure is started, that is, the <a href="#">change the context</a> .
Relation Criteria	Text box with 	Click to select relation criteria that will be displayed on the relation map.  You can select to <a href="#">show implied relationships</a> – logical relationships calculated from the model element in order to provide additional information.
Element Type	Text box with 	Click to select element types that will be displayed on the relation map.  Standard and custom subtypes of the selected element types can be optionally ir on the relation map. For example, if you want to display packages as well as prof and other custom subtypes of the Package, select this type and then click to sele 
Scope	Text box with 	Click to select packages from which the relation map structure will be shown.
