## Operational Activity

## Description

MODAF/NAF: A logical process, specified independently of how the process is carried out.
DoDAF: An activity is an action performed in conducting the business of an enterprise. It is a general term that does not imply a placement in a hierarchy (e.g., it could be a process or a task as defined in other documents and it could be at any level of the hierarchy of the OV-5). It is used to portray operational actions not hardware/software system functions.

This is also a specialization of Activity.

## Architecture Framework

DoDAF, MODAF, NAF

## Properties

| Property | Description |
| :--- | :--- |
| subject : ActivitySubject[*] | An object acting upon this OperationalActivity. |

## Extensions

UML Activity
