Validation Rules

Cameo Business Modeler has the functionality to check if a created BPMN model corresponds to the most important modeling rules defined in the Business Process Modeling and Notation (BPMN) standard. Cameo Business Modeler provides the following three validation suites to validate BPMN models:

- BPMN2 Correctness (Active) Validation Rules suite. The active BPMN2 validation in MagicDraw instantly checks the most important correctness rules of a BPMN2 model, displays errors in the model, and suggests solutions.
- BPMN2 Correctness Validation Rules suite is included in all BPMN2 projects. You may run this suite to verify if a BPMN2 model has been created correctly. This suite verifies a bigger set of correctness rules than an active validation rules set does.
- BPMN2 Completeness Validation Rules suite is included in all BPMN2 projects. You may run this suite to verify if a BPMN2 model is fully specified.
- BPMN2 Export Completeness Validation Rules suite is included in all BPMN2 projects. You may run this suite to verify if BPMN2 models have been completely defined with the required and mandatory information in models for exporting.

BPMN2 Correctness Completeness and BPMN2 Export Completenessvalidation rules are available only in the Architect edition.
