## Customizing module and object label in DataHub Explorer

To customize the node's label

1. Right-click a DOORS Data Source and select Customize label.

 The Customize label dialog opens. Enter the name of property that you want to display for the module and object by placing the property name inside quotation marks. You can append more properties or add some text, e.g., "Object Identifier":: "Object Heading". Click OK.

## A Note

When you edit the node's label, you must reload the tree in DataHub Explorer.
