

Add-on features

The current release of DataHub features enhanced capabilities and emphasizes more usability. The **Conflict Dashboard** keeps track of the changes of on both sides of the source and target nodes, which allows you to consider data synchronization. The text search function enables convenient searching for data or items in DataHub Explorer and Alias Manager. Available filtering inactive Data Sources makes it easier for you to focus on working active Data Sources, and the data copy progress bar shows the remaining percentage to complete the data copying operation.
