

Removing DHLinks

DataHub provides two options to remove the DHLink of a node as follows

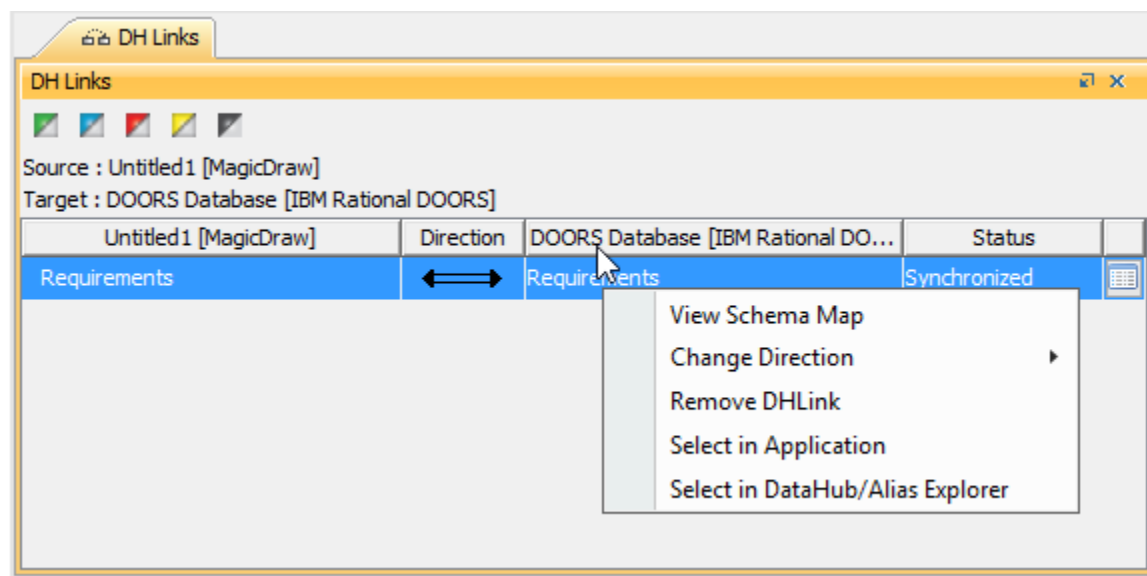

- Remove only a DHLink or DHTrace of the selected node.
- Remove all DHLinks or DHTraces recursively in the node hierarchy.

To remove a DHLink or DHTrace (recursively), do one of the following

- Right-click an item in **DataHub Explorer** and select **Remove DHLinks**.

- Right-click a DHLink in the **DH Links** panel and select **Remove DHLink**.

- Right-click a Traced or Suspect link in the **DH Links** panel and click **Remove DHTrace**.

Direction	RequirementTestcases.csv [CSV]		St
↔	Adding Local P	Remove DHTrace	Traced
↔	Automatically R	Select in Application	Traced
		Select in DataHub/Alias Explorer	

- Right-click a node in the MagicDraw Containment tree and select **DataHub Actions > Remove DHLinks**.
