

Removing a defined global variable

You can remove a global variable that has previously been defined by calling a `removeGlobalVariable(String variableName)` of the ALH API.

```
public void removeGlobalVariable(String variableName) {  
    ...  
}
```

The following code fragment shows how to remove a global variable, e.g., *GLOBAL_COUNT*, that was previously defined through ALH API.

```
ALH.removeGlobalVariable("GLOBAL_COUNT");
```
