

Creating SvcV-7 Actual table

Before creating a SvcV-7 Actual table, a [SvcV-7 Typical table](#) must be created first.

To create a SvcV-7 Actual table, do one of the following

- Add new measurable Property Set by clicking the **Add New** button and select one or more Property Sets that have at least one Measurement Set or Measurement defined (see SV-7 Typical). Specify values for each Actual Measurement directly in the table cells.
- Add existing Actual Property Sets by clicking the **Add Existing** button and select existing Actual Property Sets .
- Add missing Actual Measurements by clicking the **Add Missing Measure Types** button. The changes update in the table.

The created instances are stored in the same location as the Actual Measurements table.
