

Allocate Activities to State Internal Behaviors

You can allocate Activities to States in all state diagrams. Activities allocation in the UAF profile works in a similar way as in SysML.

To allocate an Activity to a State

1. Select an Activity, drag and hold it over the State shape in the diagram.
2. When the tool-tip appears, release the mouse button. The context menu appears.
3. Select one of the following:
 - Entry
 - Do Activity
 - Exit
