Creating a diagram

To create an Strategic Structure diagram

- 1. In the Containment Tree, select the Strategic Structure and do one of the following:
 - From the selected package's shortcut menu, select Create Diagram > Strategic Structure.

🖨 - 📩 Str	rategy		
	Strategic Connectivity		
-	Strategic Constraints		
Ē	🗄 🗝 📩 Strategic Parameters		
÷	🗄 🖷 📩 Strategic Roadmap		
Strategic States			
	Strategic Structure		
	Create Diagram: Bearch		
⊡ 📩 S 	General 🌣		
- El Code	Strategic Structure		

In the modeling tool's main menu, click Create Diagram, search for Strategic Structure and select it.

2. Name a diagram or leave it with the default name.

Creating an element

When the diagram is created, you can start creating the appropriate elements. An example is described using Whole Life Enterprise element, but the same is valid for other structural elements.

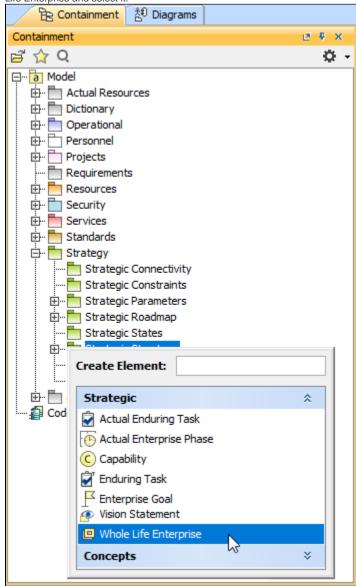

To create an Whole Life Enterprise in a diagram

1. In the diagram palette, click the Whole Life Enterprise and then click the appropriate place on the diagram pane.

Strategic Structure	×

C Actual Enterprise Phase	
Whole Life Enterprise	
Enterprise Phase	
C Capability	

2. Name the element.

1. In the Containment tree, right click the Strategic Structure package and from the shortcut menu, select Create Element. Search for the Whole Life Enterprise and select it.

- 2. Name the element.
- 3. Dragg the created element from the Containment tree to the diagram pane.

	Whole Life Enter	
Code Engineering Sets 🗸	Enterprise Phase	

To create the elements from other resources (e.g. Word, Excel, HTML)

- 1. Copy a list in your resource.
- 2. In a diagram, press Ctrl+V and from the Paste Special dialog, choose Element.
- 3. From the Select Type dialog, choose Whole Life Enterprise (or other appropriate element).
- (1)

D more information about creating the elements from other resources, see Creating elements from other resources.

Connecting the Operational Performers

When you have Operational Performer created, you can start connecting them using the Composition and Aggregation relationships.

Back to top

To connect the elements with the Composition relationship

- 1. Select an element, which will be the Composition End.
- 2. From the Smart Manipulator, which appears after you select the element, choose Directed Composition.

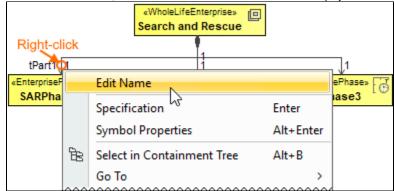

😡 can also select the Cor	(can also select the Composition relationship from the diagram palette.		
3. Mc Actual Enterprise	The target element and click to finish the action.		
Enterprise Vision To connect Yision Statement Actual Organization Se so so so so so so so so so so so so so so so so so so so so so so so so so so so so so so	gation relationship		
2. In Corganization I			
Capability Property	 Composition Directed Aggregation Aggregation 		
Enterprise Goal Enterprise Vision Vision Statement			
Enterprise Phase S	Organization in Enterprise Generalization		
& Operational	 Generalization Directed Composition Composition 		
3 Services	Directed Aggregation Aggregation		

3. Click the element which is the Aggregation End and draw the relationship to the Reference End.

Changing the role name and specifying multiplicity

To change the role name

- Right-click the selected Role end of the relationship.
 From the shortcut menu, select Edit Name. The default name will be displayed.

You can edit the default name on the diagram, in the Containment tree, or in the role's Specification window.

Back to top

To specify multiplicity

1. Right-click the selected Role end of the Composite relationship.

2. At the bottom of the shortcut menu, choose one of the default multiplicity values. «WholeLifeEnterprise» Search and Rescue Right-click tPart 1 Edit Name «Enterpriseł ePhase» 6 SARPha ase3 Specification Enter Symbol Properties Alt+Enter BB Select in Containment Tree Alt+B Go To > Display > Related Elements > Refactor > Tools > Edit Compartments ~ Show Role Stereotype Owned By > ~ Navigable ~ None Shared Composite (Unspecified) 0 0..1 0..* ~ 1 63 1..* * AutoStyler > Concept Modeling 3

You can always change the multiplicity value on the diagram or in the specification window of the role element.

Displaying created structure

If you already have created a structure in the Containment tree, you can display it on the diagram. There are three ways to display the structure:

- Relationship (direct) Notation. If you choose using this notation, the structure will be displayed on a diagram pane with the elements connected with relationships.
- Attribute Compartment Notation. If you choose using this notations, the structure will be displayed as the attributes in the Attributes compartment.
- Structure (Nested elements) Notation. If you choose using this notations, the structure will be displayed in the Structure compartment.

To display a created structure on a diagram (Direct Notation)

2. Right-click that element, and from its shortcut menu, select Display > Display Related Elements.

⚠

^{1.} Drag the selected element with the part properties on to the diagram.

3. In the Display Related Elements dialog, select Association.

also.

It Resource Artifacts (or other structural elements) were related using the Resource Association relationship, select the Resource Association

Compartments	

3. In the Compartments menu, select Attributes.

When connecting the elements with Composition/Aggregation relationships, the roles are Association Ends. In such case, the roles will not be displayed in the Attributes compartment, only in the Structure compartment.

Back to top

To display a created structure on a diagram (Structure (Nested elements) Notation)

- a. Drag the selected element with the part properties on to the diagram.
- b. Do one of the following:
 - Select the element, click the Compartments smart manipulator, and choose Structure.
 - Right-click that element, and from its shortcut menu, select Display > Display Parts/Ports.
- c. In the Display Parts/Ports dialog, select the parts you want to be displayed.
